

1. Is the Python Standard Library included with PyInputPlus?

no , it should be installed using pip install.

2. Why is PyInputPlus commonly imported with import pyinputplus as pypi?

so that we can enter the shortcut ie.pypi to call the modules function

3. How do you distinguish between inputInt() and inputFloat()?

The difference is in the data-type when you use the first one the program expects an integer value as input but in the latter it expects a float value i.e number containing a decimal

4. Using PyInputPlus, how do you ensure that the user enters a whole number between 0 and 99?

By using `pypi.inputint(min=0, max=99)`

5. What is transferred to the keyword arguments allowRegexes and blockRegexes?

A list of regex strings that are either explicitly allowed or denied

6. If a blank input is entered three times, what does `inputStr(limit=3)` do?

The function will raise `RetryLimitException`.

7. If blank input is entered three times, what does `inputStr(limit=3, default='hello')` do?

The function returns the value 'hello'
